

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph beginning on page 7, line1 with the following:

As shown in Fig. 4, the nut element 90 has a series of radially extending lugs 92 along the nut 90 outer periphery to constitute a single-piece unit. These lugs 92 detachably engage the inner surface of a cap 96. The cap 96 serves to cover the overflow pipe fitting 60 hardware. The cap 96 of one embodiment of the present invention includes a surface, which is bounded by a sidewall, that is positioned within the bathtub. The surface is configured to completely conceal the nut element and a portion of the diaphragm 80.
